Challenging post-doc opportunities in RNA research/Molecular Medicine

We are an international, dynamic RNA group at the interface of basic and medical research. Our specific interest is in NMD and 3'end processing mechanisms and their associated diseases. We are currently searching for 2 active post-docs, who will be financed by available grants and by funds provided by the Heidelberg University research prize.

We offer exciting projects that focus on the biochemical and the functional characterization of the exon junction complex and on the chemical biology of RNA processing. You will be a member of the Molecular Medicine Partnership Unit, a joint venture of the Medical Faculty of Heidelberg University and of the European Molecular Biology Laboratory (EMBL).

You will have a strong background in RNA research and will have published as first author in international scientific journals. You will want to and be able to work independently within a highly interactive and motivated group of colleagues.

Interested? Please visit our websites

(<http://www.embl.de/research/partnerships/mmpu/index.html> or (<http://www.klinikum.uni-heidelberg.de/Molecular-Medicine-Partnership-Unit.114622.0.html>) and send your full application including names and e-mail addresses of two scientists who are willing to provide a detailed reference to Jutta.Mattern@med.uni-heidelberg.de.
